

Did you know?

1. TMC's KOR-IP includes a VoIP POTS solution that allows your customers to keep their current phone and existing key system, while still leveraging the power of VoIP. You can add additional features and functionality at a fraction of your customer's current cost, with no up-front investment.
2. Your customers want business continuity features to make sure their business is always accessible. Provide them with a solution that allows them to access a remote dashboard from any PC and instantly redirect calls to an alternate number and location in the event of an outage. With TMC's VoIP products, business continuity is that simple.
3. With TMC's KOR-IP solution your customers can use their existing phones and keep their current features while adding the ability to quickly scale their services as their business needs change.
4. TMC has a solution specifically for your customer's dynamic business environment. Our KOR-IP OfficeTrunk accommodates frequent changes in call volumes from one location to another. No orders to submit, no penalties or charges related to the move, they simply reassign trunks in their dashboard to suit traffic needs.
5. TMC provides you with a seamless VoIP order process. Tired of complex order forms, Visio diagrams, and repeated rejected or delayed orders? With KOR-IP all these problems go away. Enjoy the benefit of fully-automated service provisioning that significantly cuts the time to turn-up and gets your customers up and running fast.
6. TMC gives you the ability to instantly quote and propose VoIP services. Using our fully-automated quoting tool you have the flexibility to get your customers the information they want, when they want it.
7. TMC's VoIP services offer your customer the ability to assess their VoIP readiness without an on-site visit. Customers simply run an application from their computer and they instantly see how their network configuration will work with the service. This eliminates unnecessary installation delays and gets your customers turned-up faster.
8. Your customers can use VoIP to improve their business communications, while eliminating the need to manage distinct Voice and Data networks.
